

2-1 The Nature of Matter

Atoms

The study of chemistry begins with the basic unit of matter, the **atom**.

Atoms

The atom is a building block. All things have atoms.

Atoms contain subatomic particles – they are even smaller than atoms.

2-1 The Nature of Matter →

The 3 subatomic particles that make up atoms are:

- 1) protons
- 2) Neutrons
- 3) electrons

Protons and neutrons are in the nucleus.

Electrons surround the nucleus.

Helium

Atomic number = 2

Mass number = 4

Elements

- A chemical **element** is pure (not mixed), it only has one type of atom.
- Every element has a different number of protons, electrons and neutrons.

- The number of protons in an atom is the element's atomic number.
- C stands for carbon.
- Na stands for sodium.

Atomic number

• The number of protons + neutrons in an atom is the element's atomic mass.

- C stands for carbon.
- Na stands for sodium.

Atomic mass

The number of protons = number of electrons in an atom.

- C stands for carbon.
- Na stands for sodium.

Number of electrons
